EDUCATION

Carnegie Mellon University

B.S. in Business Administration, Intended B.S. in Mathematics

Pittsburgh, PA

Expected May 2029

- **Relevant Coursework:** Real Analysis, Discrete Mathematics, Probability, Finance

Irvine High School

National Economics Challenge National Finalist; National Merit Commended Student

Irvine, CA

May 2025

RESEARCH

Mortgage Lock-In and the Federal Reserve's Quantitative Tightening Shortfall (SSRN Working Paper)

Jan 2026 – Present

- Authored independent quantitative research on why household balance sheets failed to absorb liquidity withdrawn during quantitative tightening, quantifying a \$764.7B shortfall against the counterfactual benchmark
- Decomposed the shortfall by channel, establishing that mortgage lock-in accounts for 11.9% of the trapped liquidity, which rules out household decision-making as the primary channel and locates the balance elsewhere
- Built the empirical pipeline in Python (Pandas, NumPy) using loan-level survival analysis and agent-based modeling of MBS prepayment behavior across coupon vintages

EXPERIENCE

Analyst

Sept 2025 – Present

Traders at CMU

Pittsburgh, PA

- Built Kalshi weather prediction-market strategies (5-person project), modeling peak-temperature distributions with a PyTorch BiGRU on FFT-denoised data and Monte Carlo simulation, sizing trades via fractional Kelly
- Backtested the Austin daily-high strategy (Dec 2024–Mar 2026) under real fees and a 15% fill-rate assumption: +29% return, 2.53 Sharpe, 3.6% max drawdown, 56.9% win rate over 511 trades, with 93% of 3,528 parameter sets profitable
- Showed through statistical testing that order-flow technicals and public NWS forecasts carry no standalone edge once priced in, concluding that alpha required a proprietary ML distribution plus microstructure execution rules

Investment Analyst Summer Intern

Jun 2026 – Present

Sunstone Investment Group

Irvine, CA

- Screened 70 early-stage companies for checks up to \$200K, producing a research brief on each with competitive positioning, pros and cons, and a diligence question set
- Selected 18 for founder calls and the firm's weekly demo days, pairing companies from distinct sectors in front of 20 to 30 investors
- Built the valuation criteria used to mark the firm's direct-to-consumer portfolio, reviewing [M] positions against updated comparables to support hold and write-down decisions
- Ran deeper diligence across consumer health, hardware data infrastructure, and logistics software, covering market sizing, competitive dynamics, and deal terms

Associate, Talent Team

May 2026 – Present

Foundry at CMU

Pittsburgh, PA

- Sourced and screened technical and business founders across CMU, building a ~50-founder deal pipeline
- Ran Foundry's weekly founder programming, setting session format and topics for ~20 founders and engineers per week

SKILLS

Technical: Python (Pandas, NumPy, PyTorch), regression, Monte Carlo simulation, survival analysis, agent-based modeling, Bloomberg Terminal, Excel, DCF modeling

Languages: Fluent in English and Chinese

Leadership: Treasurer and Buggy Chair, Fringe (CMU Sweepstakes racing organization)
