

EUGENE ONG

eugeneo@andrew.cmu.edu · linkedin.com/in/eugene-ong-582929190 · github.com/eugeneoCMU

EDUCATION

Carnegie Mellon University

B.S. Business Administration; intended B.S. Mathematics

Coursework: Real Analysis, Discrete Mathematics, Probability, Finance.

Expected May 2029

Irvine High School

Irvine, CA

National Economics Challenge National Finalist; National Merit Commended Student.

May 2025

RESEARCH

Mortgage Lock-In and the Federal Reserve's Quantitative Tightening Shortfall

SSRN working paper · 141 pages · revised 5 Aug 2026

Jan 2026 - present

- Authored independent quantitative research on the Federal Reserve's quantitative tightening shortfall, measuring agency MBS runoff \$764.7B below the phased redemption caps over June 2022-November 2025
- Built a loan-level survival model on Freddie Mac data recovering 91.3% of that shortfall, against a no-lock-in null already recovering 85.7%; the lock-in elasticity's own contribution is +5.6 points (\$42.6B)
- Quantified two intervals around that contribution rather than reporting one: +2.3 to +9.1 points from floor-read sampling error, +3.5 to +13.1 from the floor's functional form
- Built the empirical pipeline in Python (Pandas, NumPy) using loan-level survival analysis and agent-based modeling of MBS prepayment across coupon vintages

EXPERIENCE

Analyst

Traders at CMU

Sept 2025 - present

Pittsburgh, PA

- Built Kalshi weather prediction-market strategies on a five-person team, modelling peak-temperature distributions with a PyTorch BiGRU over FFT-denoised data and sizing trades by fractional Kelly.
- Backtested the Austin daily-high strategy from Dec 2024 to Mar 2026 under real fees and a 15% fill-rate assumption: +29% return, 2.53 Sharpe, 3.6% max drawdown, and a 56.9% win rate over 511 trades, with 93% of 3,528 parameter sets profitable.
- Showed by statistical testing that order-flow technicals and public NWS forecasts carry no standalone edge once priced in - the edge required a proprietary distribution plus microstructure execution rules.

Investment Analyst Intern

Sunstone Investment Group

Jun 2026 - present

Irvine, CA

- Ran early-stage diligence across consumer health, hardware data infrastructure, and logistics software, covering market sizing, competitive dynamics, and deal terms.
- Wrote research briefs on prospective investments setting out competitive positioning and the diligence questions worth asking.
- Contributed to the valuation framework used to mark the firm's direct-to-consumer portfolio against updated comparables.

Associate, Talent Team

Foundry at CMU

May 2026 - present

Pittsburgh, PA

- Sourced and screened technical and business founders across Carnegie Mellon, building a pipeline of roughly fifty founders.
- Ran Foundry's weekly founder programming, setting session format and topics for about twenty founders and engineers each week.

SKILLS

Technical: Python (Pandas, NumPy, PyTorch), Regression, Monte Carlo simulation, Survival analysis, Agent-based modelling, Bloomberg Terminal, Excel, DCF modelling

Languages: English, Chinese

ACTIVITIES

Treasurer and Buggy Chair, Fringe - Carnegie Mellon Sweepstakes racing.
